Karibu

Mwongozo wa ujauzito

**The NHS provides maternity care — including antenatal, birth, and postnatal care — free of charge to women who fall within the following categories:**

Ordinarily resident in the UK: requires a person to live within the UK lawfully, voluntarily, and with the purpose of settling.

EEA nationals insured by another European state.

Those exempt from charges: including refugees, asylum seekers, legal residents for at least 12 months, workers employed by a UK organization, and self-employed persons.

**NHS hutoa huduma ya uzazi - ikiwa ni pamoja na utunzaji katika ujauzito, kuzaliwa, na baada ya kuzaa - bila malipo kwa wanawake walio katika makundi yafuatayo:**

Mkazi wa kawaida nchini Uingereza: inahitaji mtu kuishi ndani ya Uingereza kihalali, kwa hiari, na kwa madhumuni ya kutulia.

Raia wa EEA waliowekewa bima na jimbo lingine la Ulaya.

Wale ambao hawajatozwa ada: ikiwa ni pamoja na wakimbizi, wanaotafuta hifadhi, wakazi halali kwa angalau miezi 12, wafanyakazi walioajiriwa na shirika la Uingereza, na watu waliojajiri.

When you are pregnant you will have regular appointments with a midwife. It is advisable to have your first appointment before 12 weeks.

Unapokuwa mjamzito utakuwa na miadi ya mara kwa mara na mkunga. Inashauriwa kufanya miadi yako ya kwanza kabla ya wiki 12.

A midwife cares for women and their families during pregnancy, birth and after the birth.

Mkunga hutunza wanawake na familia zao wakati wa ujauzito, kuzaliwa na baada ya kujifungua.

Some women also need to see a doctor as well as a midwife, when they are pregnant.  
Your midwife will arrange this.

Baadhi ya wanawake pia wanahitaji kumuona daktari pamoja na mkunga wanapokuwa wajawazito.  
Mkunga wako atapanga hili.

Your midwife appointments might be at a Doctors surgery, a Children's Centre or another clinic.

Miadi yako ya mkunga inaweza kuwa kwenye upasuaji wa Madaktari, Kituo cha Watoto au kliniki nyingine.

At the first appointment, your midwife will give you your maternity notes. You will take these notes to every appointment during your pregnancy. The midwife will make you an appointment for an ultrasound scan at this appointment.

Katika miadi ya kwanza, mkunga wako atakupa maelezo yako ya uzazi. Utachukua maelezo haya kwa kila miadi wakati wa ujauzito wako. Mkunga atakuwekea miadi ya uchunguzi wa ultrasound katika miadi hii.

You can bring a friend or relative with you to the appointments. The midwife will use an interpreter if you do not speak English.

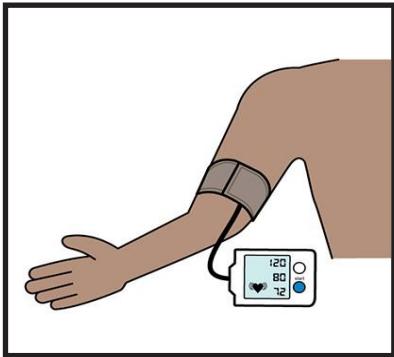

Unaweza kuleta rafiki au jamaa pamoja nawe kwenye miadi. Mkunga atatumia mkalimani ikiwa huzungumzi Kiingereza.

If you're expecting your first child, you'll have up to 10 antenatal appointments.

If you have had a baby before, you will have around 7 appointments, but sometimes you may have more – for example, if you develop a medical condition.

Ikiwa unatarajia mtoto wako wa kwanza, utakuwa na hadi miadi 10 ya ujauzito. Ikiwa umepata mtoto hapo awali, utakuwa na karibu miadi 7, lakini wakati mwingine unaweza kuwa na zaidi - kwa mfano, ikiwa unapata hali ya matibabu.

**Every time you see  
your midwife they will:**

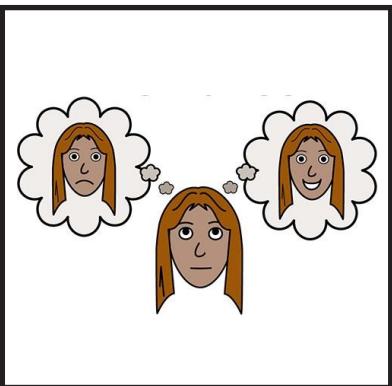

Take your blood  
pressure.

**Kila wakati  
unapomwona mkunga  
wako watafanya:  
Chukua shinikizo la  
damu yako.**

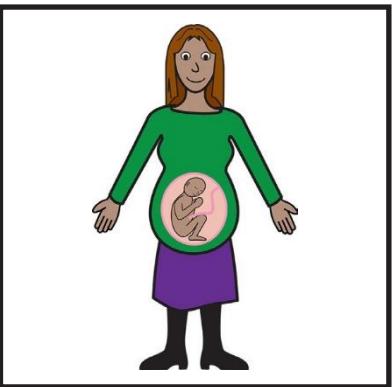

**Test your urine.**

**Jaribu mkojo wako.**

**Talk to you about how  
you are feeling  
emotionally and can refer  
you for extra support.**

**Zungumza nawe kuhusu  
jinsi unavyohisi kihisia na  
anaweza kukuelekeza  
kwa usaidizi wa ziada.**

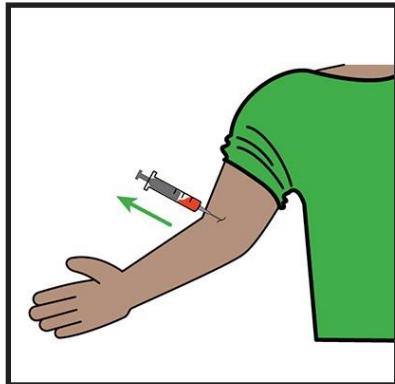

**Talk to you about your  
baby's movements.**

**Zungumza nawe kuhusu  
mienendo ya mtoto  
wako.**

As your baby grows, your midwife will measure your bump with a tape measure and plot your baby's growth in your maternity notes.

Mtoto wako anapokua, mkunga wako atapima uvimbe wako kwa kipimo cha mkanda na kupanga ukuaji wa mtoto wako katika noti zako za uzazi.

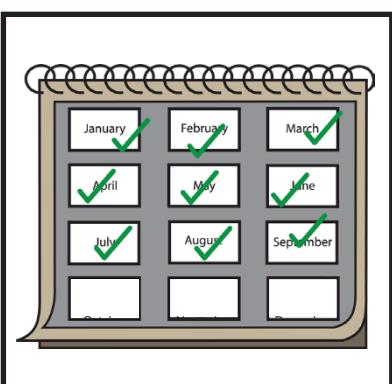

Your midwife will offer you some blood tests at the first appointment and at the 28 week appointment. These check for your blood group, an iron count and infection screen.

Mkunga wako atakufanya vipimo vyatamu katika miadi ya kwanza na katika miadi ya wiki 28. Hizi huangalia kundi lako la damu, hesabu ya chuma na skrini ya maambukizi.

Scans are done at the hospital. These are routinely performed at approximately 12 weeks and 20 weeks. Some women will need extra scans.

Uchunguzi unafanywa hospitalini. Haya hufanywa mara kwa mara katika takriban wiki 12 na wiki 20. Wanawake wengine watahitaji uchunguzi wa ziada.

Pregnancy lasts 9 months or 40 weeks.

Mimba huchukua miezi 9 au wiki 40.

### Swollen hands or feet.

This can be normal if you do not have any other symptoms, but if you are worried, please contact your hospital.

Mikono au miguu iliyovimba. Hii inaweza kuwa ya kawaida ikiwa huna dalili nyingine yoyote, lakini ikiwa una wasiwasi, tafadhalii wasiliana na hospitali yako.

It is good to go to some classes to learn about what is happening to your body and to learn about your baby.

Ni vizuri kwenda kwa baadhi ya madarasa ili kujifunza kuhusu kile kinachotokea kwa mwili wako na kujifunza kuhusu mtoto wako.
